

Design a digital poster for your web application or project idea using any tool (Canva, Figma, etc.) and upload it to a shared GitHub repository. Each team member should:

- 1. Create a separate branch and upload their own version of the poster.**
- 2. Raise a pull request to merge it into the main branch.**
- 3. Create at least one GitHub issue related to the task (e.g., 'Poster color update').**
- 4. Set up a simple GitHub Actions workflow that runs on push and displays 'Poster Uploaded Successfully'.**

Mention team names, roles, and poster tools used in the README file.
